Research Interests

Large Language Models, LLM Agents, NLP for Social Good, NLP for Low-Resource Languages, Vision-Language Models, Multimodal AI, Trustworthy AI, Multimodal Agents, Large Vision Models, Computer Vision.

Education

B. Sc. in Computer Science and Engineering *July 2019 – December 2023*
Ahsanullah University of Science and Technology *Dhaka, Bangladesh*
Undergraduate Thesis Title: *Generative Adversarial Networks for Crop Disease: A Case Study with Potato Disease Classification and Instance Segmentation*
Supervisor: *Dr. Mohammad Shafiul Alam, Professor, Department of CSE, AUST*
CGPA: *3.302 (Ranked 84th out of 145 students)*

Research Experience

Remote Research Assistant *June 2024 – Present*
Supervisor: *Dr. Laith H. Baniata, Research Professor, Gachon University, South Korea*

- Investigated research on **"Analyzing Diagnostic Reasoning of Vision-Language Models via Zero-Shot Chain-of-Thought Prompting in Medical Visual Question Answering"**. *Supported by the National Institute of Health, South Korea (Project No. 2024ER080300), and the National Research Foundation of Korea (Grant No. NRF-2022R1A2C1005316), funded by the Ministry of Science and ICT.*
  - Designed a zero-shot chain-of-thought prompting framework to guide Vision-Language Models (Gemini 2.5 Pro, Claude 3.5 Sonnet, and GPT-4o mini) in performing multi-step diagnostic reasoning on clinical images using the PMC-VQA benchmark, leading to a 41.68% improvement in accuracy over baseline models.
- Carried out research on **"SentimentFormer: A Transformer-Based Multi-Modal Fusion Framework for Enhanced Sentiment Analysis of Memes in the Under-Resourced Bangla Language"**. *Supported by the Basic Science Research Program through the National Research Foundation of Korea (NRF), funded by the Ministry of Science and ICT under Grant No. NRF-2022R1A2C1005316.*
  - Implemented the SentimentFormer framework using intermediate fusion of SwiftFormer and mBERT, which led to a notable boost in performance, with the Weighted F1 Score improving from 64.3 to 73.28, significantly outperforming previous baseline models in multimodal Bangla sentiment analysis of memes.
- Conducted research on **"Investigating the Predominance of Large Language Models in Low-Resource Bangla Language Over Transformer Models for Hate Speech Detection: A Comparative Analysis"**. *Supported by the Basic Science Research Program through the National Research Foundation of Korea (NRF), funded by the Ministry of Science and ICT under Grant No. NRF-2022R1A2C1005316.*
  - Applied Zero-Shot and Few-Shot Learning approaches (including 5-Shot, 10-Shot, and 15-Shot) using GPT-3.5 Turbo and Gemini 1.5 Pro for Bengali hate speech detection, which eliminated the need for extensive task-specific training data, enabled adaptability to low-resource scenarios, and achieved a 6.28% accuracy gain over baseline techniques across multiple datasets.
- Currently working on the research titled **"Towards Robust Chain-of-Thought Prompting with Self-Consistency for Remote Sensing VQA: A Cross-Model Empirical Study"**.

Work Experience

Dexian (Bangladesh) Limited. *May 2024 – Present*
Application Developer (AI/ML) *Dhaka, Bangladesh*

- **Project 1: Org Info**
  - Implemented a multimodal agent for extracting organizational hierarchical information from organograms using in-context learning with tree-of-thought prompting, which incorporates multipath reasoning and Breadth-First Search (BFS) to resolve relational ambiguities and ensure accurate role placement, and stored the extracted hierarchy in a relational database

- Designed an LLM-based agent that converted natural language queries into SQL using chain-of-thought (CoT) with self-consistency prompting, which enabled contextual reasoning to retrieve relevant organizational data and integrated the results into the "OrgChart front-end framework" for hierarchical visualization
- Developed a dynamic LLM-based agentic RAG-guided chat interface called "OrgInfo Assistant" that allowed users to interact with specific organizational hierarchies using predefined query types, roles, and goals, and generated context-aware natural language responses

  Technologies Used: Python, LangChain, LangGraph, Azure OpenAI, OpenCV, Azure SQL, React JS, FastAPI

- **Project 2: RFPMatcher**
  - Developed a Retrieval-Augmented Generation (RAG) solution using CoT prompting to extract key information from Request for Proposal (RFP) documents
  - Built a Past Experience Matcher score that uses Automatic-CoT prompting and preset questions to extract requirements from RFPs, then matches them against a master database of prior proposal responses
  - Enabled the system to generate Yes/No decisions with detailed explanations of how similar requirements were addressed in the past, aiding in the prediction of potential win/loss outcomes for new proposals
  - Generated dynamic Tables of Contents (TOC) based on extracted key information and historical experience to streamline and structure the proposal writing process for new bids

    Technologies Used: Python, LlamaIndex, Azure OpenAI, AlloyDB, CouchDB, React JS, FastAPI
- **Project 3: CaseAligner**
  - Built an LLM-based application using zero-shot prompting to generate PowerPoint presentations for case studies based on selected practice areas and industries
  - Implemented an interactive chat interface allowing users to query specific slide content and receive instant contextual responses
  - Developed comprehensive search functionality to locate information across all generated case studies
  - Created export capabilities for downloading slides in company's official template

    Technologies Used: Python, LlamaIndex, Azure OpenAI, React JS, FastAPI
- **Project 4: KnowledgeEngine**
  - Developed an LLM-based, multi-document RAG Q&A system for internal document information retrieval
  - Implemented a chat conversation interface with document page references for information sources
  - Maintained session-based dedicated knowledge bases to ensure user-specific context and data isolation
  - Built an admin panel enabling document upload and streamlined document management

    Technologies Used: Python, LlamaIndex, Azure OpenAI, AlloyDB, React JS, FastAPI

Ongoing Research Projects

- MindSpeak-Bangla: A Human-LLM Collaborative Dataset for Mental Health Support in Low-Resource Bengali
- BanglaMedQA: A Dataset for Adapting Zero-Shot CoT Reasoning in Bengali Medical Question Answering

Technical skills

Programming Languages	Python (NumPy, SciPy, Matplotlib, Pandas, Seaborn), Java, C++
Web Development	HTML5, CSS3, JavaScript, FastAPI, Flask, React, Streamlit
Database	MySQL, MongoDB
Deep Learning Frameworks	TensorFlow, Keras, PyTorch
LLM Application Frameworks	LangChain, LangGraph, LlamaIndex
Cloud Services	Azure OpenAI, Azure SQL Database, Azure App Service, Azure Blob Storage
Others	Vector Database, Apache Airflow, Docker, CrewAI, OpenCV, GitHub

Awards & Achievements

Poster Presentation *5th August 2023*

RESEARCH SYMPOSIUM 2023: AN INTRA-AUST RESEARCH EXHIBITION *Dhaka, Bangladesh*

Classification of Potato Disease with Digital Image Processing Technique: A Hybrid Deep Learning Framework, secured 1st position in **"RESEARCH SYMPOSIUM 2023"** organized by AUST Research and Publication Club. **Poster**
